

Improving Digital Publishing of Legal Scholarship

BENJAMIN J. KEELE

Robert H. McKinney School of Law, Indiana University, Indianapolis, Indiana, USA

Legal scholarship's main mode of formal communication, the law journal article, is mostly stuck in the print publishing model. By adopting some tools and practices made possible by digital communications, legal scholarship can become more accessible, flexible, and interdisciplinary. Instructive examples can be found in the science, technology, engineering, and medicine (STEM) journals. These practices are publishing in HTML and e-book formats and adopting persistent identifiers for scholarly works.

KEYWORDS *law journals, legal scholarship, persistent identifiers*

INTRODUCTION

Since the first law reviews were published in the late 19th century, journals have grown in numbers and influence.¹ Now there are hundreds of law journals, both student-edited and published by commercial publishers.² Law journals serve as a major venue for sharing legal scholarship with academics, practitioners, and nonlegal researchers.³ Law libraries have long supported

law journals through research and administrative assistance, and many are taking a greater role in disseminating legal scholarship.⁴

Both authors and editors of law journal articles—whether student, faculty, or professional—want legal scholarship to reach appropriate audiences in useful formats. They also want to know how their works are being used. Before widespread electronic communications, printing the articles in paper volumes and distributing them to subscribers (mostly libraries) was the best path. Now with digital publishing technologies, journals also post their content online and distribute them through legal research databases. However, most journals hew to the closest digital counterpart to printed paper, the Portable Document Format (PDF) file. Digital legal scholarship is, for the most part, comprised of black text on a white background with footnotes, typeset and paginated for publication in a print issue.

To see what is truly possible in scholarly publishing, we can look to science, technology, engineering, and medicine (STEM) journals. They have adopted tools and practices that take better advantage of the capabilities digital communications offer. These practices include publishing in formats other than PDF and using persistent standard identifiers, such as digital object identifiers (DOI) for online articles. Legal scholarship can implement these ideas with some modifications and thereby improve its accessibility and usability, both in the short term and for future generations.

This article will describe how major STEM publishers distribute in formats beyond PDF and use persistent identifiers. Then it will discuss how law journals and authors could adapt these practices for legal scholarship.

PUBLISHING BEYOND THE PDF

As far as documents go, law review articles have not been very complicated. They have plenty of text and footnotes, but compared to scientific research, there are few images or tables, much less dynamic simulations or video. STEM journals have incorporated these more-complex features to display their author's findings. Legal scholarship could be enriched through integrating images, video, and other media if law journals could augment their publishing capacities.

The key to achieving greater publishing flexibility is to discard the mentality that articles need only be PDF files. Legal scholarship's use of PDF as the virtually exclusive format of choice has prevented journals from experimenting with different media and hindered the exchange of ideas and

⁴ See Simon Canick, *Library Services for the Self-Interested Law School: Enhancing the Visibility of Faculty Scholarship*, 105 Law Libr. J. 175, 184 (2013).

research between legal scholarship and other fields of study. The attitude that law review articles should be in PDF and closely resemble articles as they were printed in the past is understandable, in the sense that PDF is comfortably familiar and therefore maintains the printed page's association with scholarly inquiry and professorial authority. PDF files can be copied, searched, and printed, but other formats can do much more. This is not to suggest that PDF should not be used but rather that it should not be the primary or exclusive distribution format.

Publishing in HTML and EPUB formats provides greater flexibility for formatting, more display options for readers, and deeper computer analysis. This is because PDF is an image-based format. It is very good at presenting content the same way, regardless of the device displaying it. HTML and EPUB, in contrast, are based on markup languages. This means the information is marked, or tagged, with directions that tell devices how to display the text. In a sense, the information is separated from its presentation so that each reader can decide how the text will be shown. Readers wishing for a particular font, larger text size, or a specific contrast level can make these adjustments. HTML is also more likely to be readable by screen reader programs used by visually challenged readers.

For example, the science journal *PLoS ONE*, published by the Public Library of Science, releases articles in HTML, PDF, and XML. Figure 1 shows the HTML version of a *PLoS ONE* article.⁵ It looks like an online Web page rather than a printed page. The table of contents on the left lets readers jump to the desired section.

For readers preferring PDF or wishing to print an article, the PDF version of the *PLoS ONE* article (Figure 3) contains all the information that can be included in a PDF file. For PDFs, the text can be laid out optimally for reading in print. Some PDF articles in STEM journals are set in two columns of text, for instance; this is great for reading on paper, but cumbersome to read on a screen.

In 2013 Cambridge University Press began publishing some journal articles in EPUB format for e-book reader devices.⁶ Looking at an article from the journal *Psychological Medicine*,⁷ we see how a scholarly article can appear as HTML, PDF, or EPUB. Figure 4 shows the HTML, and Figure 5 shows the PDF. Note that the PDF looks like a very traditional academic paper. Figure 6 shows the EPUB version displayed in Adobe Digital Editions.

⁵ Sarah Marshall-Pescini, Maria Ceretta, & Emanuela Prato-Previde, *Do Domestic Dogs Understand Human Actions as Goal-Directed?*, 9 *PLoS ONE* e106580 (2014), doi:10.1371/journal.pone.0106530.

“Do Domestic Dogs Understand Human Actions as Goal-Directed?” by Sarah Marshall-Pescini, Maria Ceretta, and Emanuela Prato-Previde is licensed under CC BY 4.0

A great advantage of the EPUB format for e-reader devices is that the text can be reflowed and resized to fit the screen of most mobile devices. The article in Figure 5 has a table of contents for navigation. EPUB also allows embedded media like images and audio files.

To my knowledge, very few law journals regularly publish in formats other than PDF. The *Yale Law Journal*, *Stanford Law Review Online* supplement, and *Richmond Journal of Law and Technology* publish in both HTML and PDF. Through a publisher, Quid Pro Quo Books, the *Yale Law Journal*, *Harvard Law Review*, *Stanford Law Review*, and *University of Chicago Law Review* publish e-book versions, including EPUB and MOBI (the format used by the Amazon Kindle) formats. While the HTML and PDF versions are generally free to access on the journals' Web sites, Quid Pro Quo Books sells the e-book versions.

Law reviews wishing to publish in HTML or EPUB may encounter a few challenges. Editors or support staff would have to acquire some tools and knowledge. Assuming Word and WordPerfect will continue to be predominant formats for submissions and editing, the conversions from those

FIGURE 4 An article from *Psychological Medicine* in HTML format. This format will display well on a wide variety of screens. Under the table of contents are additional formats available for download, including PDF and EPUB.

“Psychotherapeutic Benefits of Compassion-focused Therapy: An Early Systematic Review” by J. Leaviss and L. Uttley is licensed under CC BY 3.0

formats to HTML or EPUB should occur, as it does for PDFs, at the end of the editorial pipeline.

Converting a word processor file to HTML or EPUB is feasible but will require a learning curve. A number of conversion tools are available, ranging from open source (such as pandoc) to proprietary products. The conversion will probably not be perfect, and some level of manual inspection and editing will be necessary. Also, both HTML and EPUB allow additional metadata that will help make articles easier to find in search engines; adding this metadata in the proper way will also require some additional work.

Likewise, word processor files can be converted to EPUB format, or the HTML file can be used. Either way, there are open source (Calibre)

FIGURE 5 The article from Figure 4 in PDF format. This journal has selected a layout that is very similar to traditional paper journals.

“Psychotherapeutic Benefits of Compassion-focused Therapy: An Early Systematic Review” by J. Leaviss and L. Uttley is licensed under CC BY 3.0

and commercial (oXygen Author) tools available to handle these tasks. For law journals, time will be needed to test these conversion tools, establish templates and style sheets, and become familiar with the programs. Once procedures for conversion and quality checks are finalized, the time and energy needed thereafter should decrease. While larger publishers have established these workflows, file conversion is a realm of experimentation for law journals. With persistence, though, editors, librarians, and support staff can find tools and processes for conversion that work for them.

This work could be performed by support staff the journal may have or library staff as part of the law library’s support of legal scholarship. Conversion services could be hired to convert and format files. Finally, journal

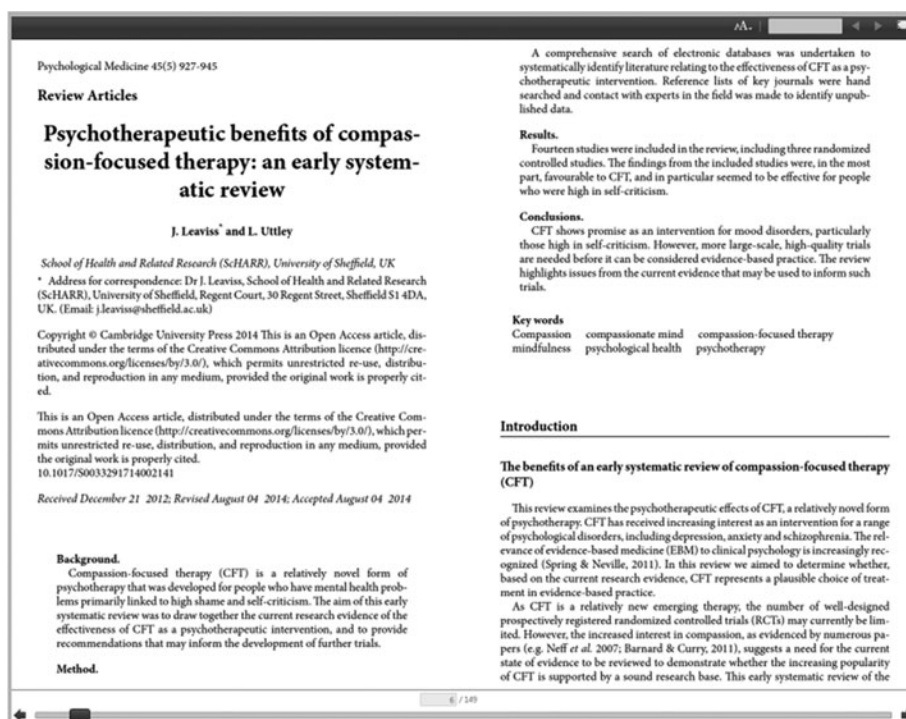

FIGURE 6 The article from Figure 4 in EPUB format, displayed in Adobe Digital Editions. This format would be best for display on an e-reader device.

editors could prepare the files as part of their duties. The main downside to this approach is that editors change every year, so some resources will have to be committed to training. However, a journal considering publishing in more formats should weigh the benefits of increased accessibility and flexibility for readers against the resources that would be expended.

Some cultural norms in legal scholarship will also have to change. Page numbers may no longer be the obvious choice for pinpoint citations. STEM journal PDFs have page numbers, but they start at page 1 and often note that the pagination is not for citation purposes. One option would be to designate the PDF with pagination as the canonical version that should be cited. Another option more attuned to Web publishing is to use paragraph numbers. This approach has a couple of advantages. First, the article is amenable to pinpoint citation regardless of format, and second, a citation to a paragraph is more precise than one to a page.

Paragraph numbers have been adopted by a few law journals, among them the *Richmond Journal of Law and Technology*⁸ (Figure 7), the early

⁸ Michael Arnold & Dennis R. Kiker, *The Big Data Collection Problem of Little Mobile Devices*, 21 *Richmond J. L. & Tech.* 10 (2015), <http://jolt.richmond.edu/v21i3/article10.pdf>.

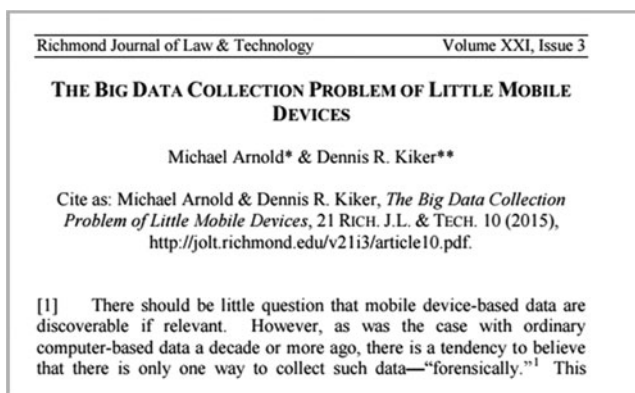

FIGURE 7 An article from the *Richmond Journal of Law & Technology* displays paragraph numbers in brackets. PDF displays paragraph numbers in brackets. Paragraph numbers allow precise citation to a paragraph, regardless of the file format.

issues of the *Journal of Legal Analysis*⁹ (Figure 8), and *Law Library Journal*¹⁰ (Figure 9).

A number of courts have adopted citation rules that favor paragraph numbers over page numbers in reporter volumes (also called media or vendor neutral citation).¹¹ The American Association of Law Libraries' *Uniform Citation Guide* also favors paragraph numbers. Once a policy decision is made to change this citation norm, it would not be difficult to add paragraph numbers as the article is edited. Certainly, changes would have to be made, and legal scholars and publishers should consider whether those changes are justified by the possible benefits.

USING PERSISTENT IDENTIFIERS

Law journals have tiptoed into digital publishing, and they have already experienced some of its challenges. One major difficulty is dealing with link rot—that is, URLs that no longer work because the linked document has been

moved to another location, placed behind a paywall, or deleted. A number of studies have found that link rot is undermining the usefulness of law journal citations of online sources.¹² This is concerning when formally published scholarship is expected to be stable and reliably accessible. Web sites are often reorganized or redesigned (and rightfully so; we certainly would not expect all journal Web sites to refrain from updating their software or adding features), but this means that citations to articles may not always point to the cited source. Broken URLs in footnotes reduce articles' credibility and make life difficult for later researchers who want to double-check an article's claims or further investigate relevant literature.

Law journals may overhaul their sites more often than other scholarly publications because their leadership changes regularly and, like new homeowners, the new editors may want to make the journal Web site their own. If an online renovation results in articles being taken down or moved, any

footnotes including the old URLs are likely to break. Redirects are an option, but editors are unlikely to be able to maintain multiple layers of redirects to keep all the URLs functional. Broken links to a journal's articles hurt the citing articles and complicate the task of determining where and how often the journal's content has been cited. Reducing link rot would strengthen the law's scholarly literature.

The primary tool used by STEM publishers to address this problem is digital object identifiers (DOIs). DOIs have been established as an International Standards Organization standard and are often used like URLs. However, a DOI is assigned to an intellectual object and then matched with a URL for its

current online location with a registry. If an article's URL changes, the publisher provides an update to the registry. When a researcher enters a DOI in a browser URL bar, the DOI is resolved to the current URL. Thus, DOIs provide a persistent way for publishers to point readers to articles. DOIs are useful for addressing link rot in citations of scholarly works; for other types of online resources, other Web archiving services, such as Perma, the Internet Archive's Wayback Machine, and WebCite, should be used.

CrossRef is a major DOI registration agency in the scholarly communications field. Membership fees are required, but academic law journals could join through an affiliated university press or university library, which may reduce the cost. The California Digital Library offers a service called EZID for assigning and maintaining DOIs for research products.

A DOI is written "10.(publisher prefix)/(publisher-assigned identifier)." For example, the DOI 10.2307/1372820 is expressed as a URL by adding "doi.org/" in front, so doi.org/10.2307/1372820 resolves to <http://www.jstor.org/stable/1372820>. This is a *Duke Law Journal* article in JSTOR.¹³ Even if JSTOR changes its Web site or transitions to new ownership, if it fulfills its duty and updates the CrossRef registry, that DOI will lead to that article. Each DOI points to one copy of a work. The same article is available in Duke's digital repository, but that DOI will not point to that copy. Also, a DOI may lead to a copy that requires payment or subscription. Like a normal URL, a DOI does not distinguish between business models.

DOIs can be used like serial numbers for articles such that a citation network can be established and researchers can know what articles cite to and are cited by other works. CrossRef provides a service called cited-by linking. This is a database of citation connections between articles in CrossRef's registry and an optional service that is available once a journal begins assigning DOIs to its articles. If a journal wishes to know what articles cite to its articles, it must participate in cited-by linking and provide CrossRef with data on the journals' articles and their citations.

Figure 10 shows an article from *Advances in Bioinformatics*.¹⁴ The article has a DOI in its citation information, and the first entry of its bibliography has a "View at Publisher" link. This link uses the cited article's DOI and shows that CrossRef's system has connected the two articles.

Figure 11 shows the other side of this linking. This article from *PLoS Medicine*¹⁵ has a sizable list of works that cite to it. This list is generated from CrossRef's database of citation connections.

Cited-by linking serves a similar function to Westlaw’s KeyCite, Lexis’s Shepard’s, and HeinOnline’s ScholarCheck but with some remarkable improvements. First, the citation network is more open; a reader does not need to subscribe to a proprietary database to see the citations to and from the article, though the full text of the article can be kept behind a paywall. It is also open in another sense. DOIs are used by journals in many other fields of study, so citations to legal scholarship from nonlegal authors could be recorded through the DOIs, even if the nonlegal articles would never be added to a legal research database. Google Scholar captures some of these nonlegal citations, but thus far I have noticed a number of errors in the citation counts and irregular determinations as to whether one article actually cites another. The DOI data are vetted by the publisher and CrossRef, so they are more likely to be accurate.

Cited-by linking is optional, so any list of citations cannot be known to be complete. However, it is another useful way to ascertain how legal scholarship connects to other disciplines, and the citation network would become stronger if more law journals joined and added their citation data.

There have been a few suggestions that law journals adopt DOIs as part of their citations and metadata.¹⁶ Some law journals that are published

¹⁶ Lyons, *supra* n. 9, at 687; John Doyle, *The Business of Law Reviews*, 39 Conn. L. Rev. CONNtempulations 30, 33 (2007); Zittrain et al., *supra* n. 8, at 189.

in the journal databases JSTOR and Project MUSE have DOIs assigned to the copies in the databases, and journals by major academic publishers also generally use DOIs. SSRN now assigns DOIs to working papers uploaded to its database. While very few student-edited law journals have implemented DOIs, one notable exception is the *University of Pittsburgh Law Review*, shown in Figure 12.¹⁷ Published by the University of Pittsburgh University Library System, the law review's articles since 2003 have DOIs. The *University of Pittsburgh Law Review* has not yet joined the cited-by linking network, but with DOIs it at least has that option.

In addition to joining CrossRef and assigning DOIs for its articles, journals that participate in cited-by linking provide citation metadata in accordance with CrossRef's XML (another kind of markup language) standards. While this may seem technically intimidating, CrossRef has ample documen-

tation that would help journal editors or support staff establish workflows to collect and supply necessary information to CrossRef.

In addition to facilitating reliable online access and establishing citation networks, using DOIs also enables journals to collect information on other, less-traditional ways its content is being used. These altmetrics (from alternative metrics) include counting mentions of articles on blogs, Twitter feeds,

FIGURE 13 The HTML version of an article in *PeerJ*. At the bottom on the left column is metrics data for the article. The metrics show the number of visitors, views, and downloads of the article.

“Artificial Light and Nocturnal Activities in Gammarids” by Elizabeth K. Perkin, Franz Hölker, Stefan Heller, and Rüdiger Berghahn is licensed under CC-BY 3.0

and other less formal venues of communication.¹⁸ Since DOIs are a relatively stable and open way of pointing to a specific article, tools can compile those mentions into scholarly impact profiles. This article (Figure 13) from STEM journal *PeerJ* shows how altmetrics can be used.¹⁹

Another example is ImpactStory, a nonprofit that has developed tools that collect references to an author’s scholarly work and compile them into a profile that can be used to supplement the author’s traditional academic CV (Figure 14).²⁰

Many legal academics are active blog authors and Twitter users; if legal scholarship used DOIs as part of citations to articles, one could capture an article’s influence in less-formal legal and nonlegal publications. Adding altmetrics and cited-by linking to the tools we currently use, like Google Scholar and legal research databases, will let academic authors and their institutions better understand their audience and influence, both within and

beyond their discipline. As legal scholarship becomes more interdisciplinary, adopting DOIs, cited-by linking, and altmetrics will help connect legal works with scholarship in related fields.

In addition to obtaining needed funding and administrative support for joining CrossRef and participating in its network, there are a few other challenges that should be addressed. Many legal articles have multiple copies existing in different places. It is not difficult to imagine an article being posted on an author's personal Web site, an institutional repository of her university, the journal's Web site, and SSRN (whether as a draft or the final published version). A DOI can point to only one of these copies, so it must be understood that while a DOI helps ensure persistent access to at least one copy of the article, there may well be more, equally legitimate copies available.

An article having a DOI does not mean it must remain online forever, but a persistent identifier does indicate an intention to keep the work persistently available. Thus, law journals and authors should have an understanding as to when a work is finalized and persistent citation and linking

FIGURE 15 This article from *F1000 Research* has two versions, both of which are available to readers. In the right column, readers can see the article's revision history, peer reviews, and access each version of the article that was submitted.

"Interpretation of mRNA Splicing Mutations in Genetic Disease: Review of the Literature and Guidelines for Information-theoretical Analysis" by Natasha G. Caminsky, Eliseos J. Mucaki, and Peter K. Rogan is licensed under CC BY 4.0

is appropriate. One option is to assign DOIs only to works that have been formally published, however that is defined (acceptance by a journal, or perhaps an author simply declaring it as a completed work). This makes SSRN's practice of assigning DOIs to working papers somewhat of an aberration. Especially confusing is that the same DOI is assigned to a paper regardless of whether a new draft is uploaded. An early draft of a paper may be posted to SSRN and receive a DOI. Later drafts are uploaded and replace the first draft; finally, the published version is posted. The DOI points only to the latest version, raising the possibility that researchers may cite a working paper with a DOI, and later the content of the paper they have cited may change.

Another option is to publish each draft as a distinct work but link all the drafts together as related. This is the approach taken by STEM journal *F1000 Research* (Figure 15).²¹ As a paper progresses from submission through peer review and revision to an accepted article, each draft is published and given a different DOI. The researcher can easily see which version is the final article, but drafts that may have been referenced earlier are

²¹ Natasha G. Caminsky, Eliseos J. Mucaki, & Peter K. Rogan, *Interpretation of mRNA Splicing Mutations in Genetic Disease: Review of the Literature and Guidelines for Information-theoretical Analysis* [v2; ref status: indexed, <http://f1000r.es/54y>], 3 *F1000Research* 282 (2015), doi:10.12688/f1000research.5654.2.

still online, and one can see how a paper changed in response to reviewer comments.

Legal scholarship generally does not employ formal peer review, and this is a level of transparency that may not be comfortable for some authors. Nonetheless, SSRN and academic repositories would do well to consider when a scholarly work that is not formally published is sufficiently developed to warrant more than transitory availability.

CONCLUSION

In 1996, Bernard Hibbitts speculated that law review publication “as we know it” could disappear in the next decade.²² Eighteen years later, Hibbitts would probably still recognize the law reviews published today, even if he read the articles on his computer rather than paper. Hibbitts’s call for legal scholarship to embrace digital publishing is still relevant, though the options have evolved. STEM journals show that publishing in HTML and EPUB, along with PDF, and assigning persistent identifiers to digital articles is feasible. Law libraries provide crucial support for producing, disseminating, and collecting legal scholarship. This scholarship will become more accessible and flexible if law journals, likely with help from law libraries, adopt some of these practices.

ACKNOWLEDGMENT

This paper was first presented at the Legal Scholarship We Like and Why It Matters conference, sponsored by the *Journal of Things We Like (Lots)*, on 8 November 2014.
